

DESCRIPTION

DIGITAL METER for the following input signals:

- PROCESS ($\pm 10V$, $\pm 200V$ and $\pm 20mA$)
- TEMPERATURE (Pt100, Pt1000, TC J, K, T and N)
- POTENTIOMETER (100Ω to $100k\Omega$)
- RESISTANCE (999.9Ω , 9999Ω and $50.00k\Omega$)

JR-P and **JR20-P** models admit several signal input types to control industrial processes. Easy to scale into desired engineering units, directly by frontal keys or real input signal value in teach mode.

Universal AC/DC voltage supply. Fully configurables through 3 frontal keys, they allow signal input type selection and also provide a **24V DC @ 30mA** output for sensor excitation.

4 digit indicator with **14mm** digit and **-9999** to **9999** display range for JR-P and **20mm** digit and **-1999** to **9999** display range for JR20-P, configurable decimal point and 2 led for setpoints status indication (if output 2RE option card is installed).

Detection, saving, later recalling and resetting of maximum and minimum values reached by the input signal since last reset activation. Reset function sets automatically memorized value to current input signal value when maximum or minimum value are displayed. Maximum and minimum values recalling to display and reset functions are directly available through frontal keys.

Capable of measuring 3-wire **Pt100** and 2-wire **Pt1000** (IEC 60751) and **Thermocouple** (IEC 60584-1) **Temperature**, 3-wire **Potentiometer**, 2-wire **Resistance** and **Process** input signals.
