

## High-Precision Torque Sensor for non-rotating applications

### MODEL 8625

**NEW**  
immune to side loads  
thanks to support bearings

8625 with flange

8625 with bracket

#### Highlights

- Measurement ranges of 0 ... 0.01 N·m to 0 ... 200 N·m
- Linearity error as low as from  $\leq 0.05$  % F.S.
- Standardized output signal
- Tare function, filter and average values configurable

#### Options

- Output signal  $\pm 10$  V / USB
- burster TEDS
- Bracket or flange adapter offers choice of mounting options
- Immune to side loads thanks to built-in support bearings
- Dual-range model

#### Applications

- Test setups for precision mechanics
- Measuring the frictional torque of bearings
- Measuring the torques applied to vehicle control elements and knobs
- Reference sensor in calibration systems

#### Product description

This high precision torque sensor is designed for both static and dynamic measurements on non-rotating applications. It is particularly suitable for torque measurements on, for instance, extremely small electrical actuating drives and micro-mechanical actuator elements, or for measuring reaction torques e.g. on micro-motors.

The high accuracy of measurement also makes this sensor ideal for use as a reference in many fields of industrial manufacture as well as laboratory research and development projects. Not containing any rotating parts, it requires no maintenance if properly used.

The strain-gage based sensor's modular design allows precise configuration for the desired application. With the integrated amplifier option, the sensor directly supplies a voltage signal of 0 ...  $\pm 10$  V that is proportional to the torque. The sensor can be configured via the micro-USB interface, providing access to, for example, a filter frequency setting, averaging, and a tare function. Measurements via USB in addition to the voltage output are available with the USB measurement option. The sensor comes with the DigiVision software for performing measurements and data archiving, with drivers additionally available e.g. for LabVIEW. Integration into custom software is possible via DLL.

The burster TEDS option (electronic data sheet, memory chip with sensor-specific data) allows rapid configuration of compatible evaluation units (instrumentation amplifier, indicator, ...).

## Technical Data

8625	-	4010-VXXXXX	4020-VXXXXX	4050-VXXXXX	4100-VXXXXX	4200-VXXXXX	4500-VXXXXX	5001-VXXXXX

Dimensional drawing - measuring ranges 0.01 Nm ... 10 Nm

Holes on the sensor underside only up to 10 N.m. For detailed dimensions, including with fitted flange or bracket, you can find sensor CAD data on our website [www.burster.com](http://www.burster.com).

Dimensional drawing - measuring ranges 20 Nm ... 200 Nm

## Electrical values

7-pin miniature connector, additionally micro-USB interface for configuration/measurement (Option, USB connection cable included)

**Wiring Code** depends on the options selected

Pin	Assignment without electronic	Assignment with electronic
1	Bridge supply -	Supply GND
2	Bridge supply +	Supply +5 ... 30 V
3	Shield	Shield
4	Signal +	Output signal ±10 V
5	Signal -	Output signal GND
6	TEDS I/O (option) / NC	Control signal
7	TEDS GND (option) / NC	Switching between ranges (option)

## Accessories

### Flange-mounted model

The flange adapter allows easy integration of the sensor in existing equipment with a flange connection. When ordered with the sensor, the flange adapter comes pre-fitted; please refer to order code.

**Alternatively it can be ordered separately as an accessory.**

Please refer to the accessories data sheet 8600-Z00X

### Bracket-mounted model

The bracket provides a quick-to-fit and stable fixture for the sensor. When ordered with the sensor, the bracket comes pre-fitted; please refer to order code

**Alternatively it can be ordered separately as an accessory.**

Please refer to the accessories data sheet 8600-Z00X

### Integrated amplifier with USB interface

This sensor model comes with a USB port in addition to the  $0 \dots \pm 10 \text{ V}$  output.

Two versions are available:

- $\pm 10 \text{ V}$  output signal, USB used solely for configuration
- $\pm 10 \text{ V}$  output signal, USB used for both configuration and measurement

When a USB-based measurement is launched, the analog output signal is disabled because it is not possible to use both forms of output simultaneously.

With both versions, the measurement signal can be tared, averaged or filtered. These functions can be set up and/or activated via USB and the free version of DigiVision.

### Metal-bellows couplings

Metal-bellows couplings provide optimum misalignment correction. We recommend torsionally rigid metalbellows couplings. These couplings feature extremely high torsional stiffness under applied torque and extremely low restoring forces. The clamp fasteners come in two parts to 10 N·m for easy and reliable fitting/removal. From measuring range 20 N·m the metal-bellows couplings model 8690 can be used with keyways.

Please refer to the accessories data sheet 8690 or 8691.

### Dual range

With integrated amplifier and from the 2 Nm measuring range and up, the dual-range option can be selected. The following subdivisions are available:

Graduation:	1:2	1:4	1:5
	Upper scale value of second range		
2 Nm	1 Nm	0,5 Nm	-
5 Nm	-	-	1 Nm
10 Nm	5 Nm	-	2 Nm
20 Nm	10 Nm	5 Nm	-
50 Nm	-	-	10 Nm
100 Nm	50 Nm	-	20 Nm
200 Nm	100 Nm	50 Nm	-

The second, smaller measuring range can be activated via USB or plugging the operating voltage to pin 7.

### Support bearing at the test end

The support bearing option significantly increases the sensor's side load immunity. Especially in manually operated applications, correct application of the torque without parasitic loads usually cannot be guaranteed.

The support bearing largely separates these forces from the measuring element, making measurement results much more reproducible.

## DigiVision configuration and analysis software

### Features

- Can be used to actuate tare function, with value stored in sensor
- Configuration options for averaging and filters; value stored in sensor
- Intuitive user interface
- Automatic sensor identification
- Sensor calibration data readout

### DigiVision Light PC software

freely available on our website

DigiVision configuration and analysis software max. 200 measured value/s for one sensor

### DigiVision Standard PC software

Model 8625-P100

DigiVision configuration and analysis software up to 16 channels

### PC-Software DigiVision Professional

Model 8625-P200

DigiVision configuration and analysis software with additional configurable maths channel; up to 32 channels

### USB measurement option

- Numerical & graphical display and measurement of the physical torque value
- Practical start and stop trigger functions
- 4 limits can be configured for each measurement channel
- MIN/MAX value acquisition
- Automatic scaling
- Measurement reports can be saved as Excel or PDF file
- Archive viewer for displaying sets of curves
- X Multichannel measurements, even with different sensors (e.g. 9206, 8631, 8661) available with standard version

## Accessories

### Order code

9900-V594	Mating connection 7 pin
9900-V596	Mating connection 90°-angle
99594-000A-0150030	Connecting cable, length 3 m, other end free
99596-000A-0150030	Connecting cable, length 3 m, plug with 90°-angle, other end free
99141-594A-0150030	Connecting cable for burster desktop instruments with 12 pin socket, length 3 m
99209-586C-0510030	For model 9235, model 7281 and model 9311
9900-K358	Micro USB cable, length 1.8 m
8625-P100	DigiVision Standard configuration and analysis software; up to 16 channels
8625-P200	DigiVision Professional with additional configurable maths channel; up to 32 channels
	DigiVision Light configuration and analysis software, max. 200 measured value/s for one sensor (freely available on our website)
8600-Z00X	Flange-mounted or bracket-mounted, see accessories data sheet 8600-Z00X

## Calibration

### Manufacturer Calibration Certificate (WKS)

Special calibration for clockwise or/and counter clockwise direction torque, in 20 % steps of range up and down.

### DAkkS Calibration Certificate

DAkkS calibration certificate per DIN 51309, clockwise and/or anticlockwise torque, with eight steps spaced across the measurement range, increasing and decreasing.
