

Miniature Ring Load Cell

MODEL 8438

Highlights

- Measuring ranges from 0 ... 100 N up to 0 ... 200 kN
- Continuous centric internal hole measured to fit
- Flat disc design
- Protection class IP65
- Completely welded sensor body
- Internal thread in the bottom for fixing

Options

- burster TEDS
- Standardization of the nominal sensitivity
- Various cable lengths available
- Customization of geometry possible

Applications

- Force monitoring during riveting
- Measuring contact forces in hydraulic stamps
- Monitoring pulling forces during wire production
- Monitoring of forces in prestressed concrete structure

Product description

The force to be measured must be introduced axially and perpendicularly to the entire surface of the inner and outer bands of the sensor in the opposite direction. Conversion of the acting force into an electrical output signal is performed by strain gages connected together in a full bridge circuit.

To achieve optimal accuracy, the base of the sensor should rest on a smooth level surface, hardened to at least ≥ 58 HRC with sufficient dimensions. The base cover welded to the surface has a stabilizing effect on the sensor element. Lateral forces must be avoided anyway as they distort the measured results. Tension and bending relief for the sensor cable is to be carried out on the machine side.

Medium measuring ranges

Mounting	
	Requirements for evenness of the mounting surfaces: 5 µm, Parallelism of the mounting surfaces: 20 µm. Surface hardness: ≥ 58 HRC.
Mounting instructions	Mounting: measuring range ≥ 0 1000 N
	There are three mounting holes on the lower side of the sensor, equally spaced on T diameter with division 120°, one hole is located directly across the cable exit. This kind of mounting is allowed for compression load only

MTS Messtechnik Schaffhausen GmbH Mühlenstrasse 4, CH-8260 Stein am Rhein, Telefon +41 52-672 50 00, Telefax +41 52-672 50 01, www.mts.ch, e-mail: info@mts.ch

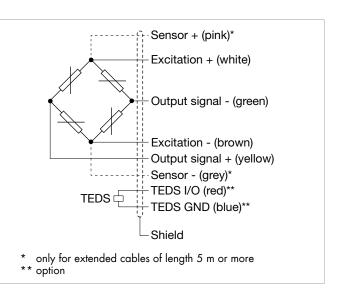

Electrical termination

Output signal

burster load cells are based on a strain-gage Wheatstone bridge. This measurement principle means that the output voltage mV/V is highly dependent on the sensor supply voltage. Our website contains details of suitable instrumentation amplifiers, indicator and display devices and process instruments.

The "**burster T**ransducer **E**lectronic **D**ata **S**heet" (TEDS) is a memory in which identification data of the sensor, calibration data and other sensor parameters are saved. In conjunction with your own suitable burster device, there is the option of performing a simple adjustment in order to achieve the maximum accuracy of the measuring chain. A simple sensor exchange is thus possible in just a few steps without losing precision.

Accessories

Connectors and units

Order code	
Connectors	
9941	Connectors 12 pin, suitable to all burster desktop units
9900-V209	Connectors 9 pin, suitable to SENSORMASTER, DIGIFORCE® and TRANS CAL
9900-V229	Connectors 9 pin with TEDS
9900-V245	Connectors 8 pin, suitable to ForceMaster
Units	
7281-V0001	Mobile measuring device with strain gage simulator and sensor test (R _i , R _a , Shunt, R _{ISO})
refer to section 9	Sensor electronics, amplifier and process control units like digital indicator model 9180, model 9163, modular amplifier model 9250 or DIGIFORCE® model 9307

Calibration

Test and calibration certificate									
Included in scope of delivery of sensor	Amongst other data, includes figures for zero point, full-scale output and calibration offset								
Standard factory cali	bration certificate for load cells or measurement chains (WKS)								
Optionally available	Our standard factory calibration is performed in 5 force steps (20% steps) starting from zero until the reaching the nominal force, for increasing and decreasing compression load under the same installation position.								
Special factory calibration certificate for load cells or measurement chains (WKS)									
On request	We are happy to calibrate sensors and measurement chains to the customer's specification.								
Calibration certificate	with accreditation symbol for product group load cell 8438								
Optionally available	Calibration certificate with accreditation symbol for load cell 8438. Calibration is performed on the basis of the accreditation of the calibration laboratory D-K-15141-01-00, for the scope of accreditation listed in the annex to the certificate. The traceability to national standards as well as a wide international recognition (DAkkS as signatory of the Multilateral Agreements of EA, ILAC and IAF) are thus guaranteed. Calibration is performed according to ISO 376 in 10 force steps (10% steps) vstarting from zero until the reaching the nominal force, for increasing and decreasing compression load under various installation positions.
