

Press Load Cell

for hand and automatic operated presses

MODEL 8552

Flexible mechanical adaption

Highlights

- Measuring ranges from 0 ... 100 N up to 0 ... 25 kN
- Small, compact design
- Pin/hole diameter from 8 mm to 16 mm
- Different diameter for pin and hole can be combined
- Mechanical overload protection for all measurement ranges

Applications

- Forces in component joining
- Press-fitting
- Bending forces during material deformation
- Cutting forces when severing material
- Forces during stamping processes
- Punching forces for blanks
- Break-out forces used in destructive testing

Simple adapter mounting

Mounting potentiometric displacement sensors of the 871x model series

Flexible configuration of hole and pin

Product description

The load cell measures the compression forces between the circular contact surfaces of plunger and tool. The pin on its top side and hole on its lower face are simply provided for mechanical fixing and centering the components correctly. To provide as large a range of mechanical compatibility as possible, the pins/holes are available in different diameters. Attachments are available which clamp onto the press sensors to enable easy mounting of displacement sensors according to the circumstances of use.

Electrical termination

Output signal

burster load cells are based on a strain-gage Wheatstone bridge. This measurement principle means that the output voltage mV/V is highly dependent on the sensor supply voltage. Our website contains details of suitable instrumentation amplifiers, indicator and display devices and process instruments.

burster TEDS

The "**burster T**ransducer **E**lectronic **D**ata **Sheet**" (TEDS) is a memory in which identification data of the sensor, calibration data and other sensor parameters are saved. In conjunction with your own suitable burster device, there is the option of performing a simple adjustment in order to achieve the maximum accuracy of the measuring chain. A simple sensor exchange is thus possible in just a few steps without losing precision.

Accessories

Connectors and units

Order code	
Connectors	
9941	Connectors 12 pin, suitable to all burster desktop units
9900-V209	Connectors 9 pin, suitable to SENSORMASTER, DIGIFORCE® and TRANS CAL
9900-V229	Connectors 9 pin with TEDS
9900-V245	Connectors 8 pin, suitable to ForceMaster
Displacement transducer	
8712/8713	Potentiometric displacement transducers
5501-Z004	Mounting potentiometric displacement sensors of the 871x model series
Units	
9110	ForceMaster 9110 - Monitoring for hand presses
refer to section 9	Sensor electronics, amplifier and process control units like digital indicator model 9180, model 9163, modular amplifier model 9250 or DIGIFORCE® Model 9307

Examples

Example showing use of mounting parts to fit displacement sensor Model 5501-Z004

The displacement sensor is flange-mounted to the bracket and requires its own external reference from which to measure the displacement.

Example of a measuring chain

Load cell	8552-6005-N0H0SBB0
Displacement sensor	8713-50
Connector plug	9900-V221
Fitting of plug	99005
Mounting parts	5501-Z004
ForceMaster	9110-V0000

Calibration

Test and calibration certific	ate
Supplied with the sensor	Amongst other data, includes figures for zero point, full-scale output and calibration offset
Standard factory calibratio	n certificate for load cells or measurement chains (WKS)
Optionally available	Our standard factory calibration is performed in 5 force steps (20% steps) starting from zero until the reaching the nominal force, for increasing and decreasing compression load under the same installation position.
Special factory calibration	certificate for load cells or measurement chains (WKS)
On request	We are happy to calibrate sensors and measurement chains to the customer's specification.
Calibration certificate with	accreditation symbol for product group load cell 8552
Optionally available	Calibration certificate with accreditation symbol for load cells 8552. Calibration is performed on the basis of the accreditation of the calibration laboratory D-K-15141-01-00, for the scope of accreditation listed in the annex to the certificate. The traceability to national standards as well as a wide international recognition (DAkkS as signatory of the Multilateral Agreements of EA, ILAC and IAF) are thus guaranteed. Calibration is performed according to ISO 376 in 10 force steps (10% steps) vstarting from zero until the reaching the nominal force, for increasing and decreasing load under various installation positions.
